

Overview

Centralizer for DN300-600 pipes, with 4 skids fitted with steel wheels, that allow the guide to easily slide along the pipe. The skids give stability to the centralizer, particularly strained when used with nozzles with chains.

Through a mechanical device it is possible to adapt the position of the guide inside the pipe, to optimize the efficiency of the nozzle.

In order to enable the connection with the flexible hose a swivel joint has been installed.

It is a must for nozzles with chains (Maniago, Friuli, Catena), and recommended for slow rotation nozzles (Warthog).

Technical Specifications

Inlet	1”F swivel (other connections available upon request)
DN (mm)	300-600
Weight (kg)	22
Skid length (mm)	450
Total length of the centralizer w/joint (mm)	500
Maximum Pressure (bar)	250

Items

Part No.	Description
5025.03	EXTENDABLE CENTRALIZER 1” M-F 300 – 600MM IN STEPS
