

MAGNETIC HOIST - MR. OLIMPIA

Overview

Mr. OLIMPIA is a universal magnetic manhole cover lifter suitable for opening any type of cast iron manhole or grate and is a tool that reduces the risk of back injuries. Made of stainless steel, with a weight of less than 5 kg and a magnet with an attraction force of 400 kg, it stands as an indispensable device in the equipment of operators engaged in the maintenance, cleaning and inspection of sewers or underground utilities in general.

Characteristics

A large magnet with 240 cm surface delivers exceptional magnetic power even on covers with very structured or dirty surface. This means that in most cases the tool is limited not by the strength of the magnet but only by the user's own strength or by the safety at work regulations respectively. With Mr. Olimpia the cast iron covers can be lifted, tilted or dragged. The self-standing mode reduces the need to bend down for picking up the tool. All metal parts are made of stainless steel to ensure long lifespan and easy maintenance. Mr. Olimpia comes with a wooden protection cap to avoid unwanted magnet contacts while not in use.

Characteristics

- Rubber handles;
- Reflective element for safer use in traffic;
- All metal parts made of stainless steel;
- Rubber grip for easy carrying;
- Wooden protection cap;
- Knuckle joint with self-standing mode;
- 400 kg magnet with 240 cm² surface.

Technical Specifications

Magnetic Strength	400 kg
Magnetised area surface	240 cm2
Height	75 cm
Weight	4,7 kg

Items

Part Number	Description
5400.25-03	Magnetic Hoist with Hammer – 400 kg magnete force.
5400.25-08	Magnetic Hoist with Hammer – 500 kg magnete force.
